

Migration from SAP to One Identity Manager made easy

With ASCONSIT FastLane

After 2027, SAP will no longer support SAP Identity Management (IDM). The discontinuance of this solution is the perfect opportunity to evaluate migration strategies to move off SAP and onto another solution that provides even greater long-term value.

The challenge:

Your company has relied on SAP for decades and is very comfortable with its usability and functionality. When your SAP tool is discontinued you need to transition to a solution that feels familiar yet offers enhanced capabilities – all without disrupting business operations.

The solution:

Identity Manager offers the continuity and innovation your organization needs. With functionality that streamlines and protects your business operations, Identity Manager is designed to ease the transition from SAP. It's the only solution on the market which has been SAP certified.

Couple Identity Manager with ASCONSIT FastLane for the simplicity you need and the continuity your customers expect. FastLane allows you to set up workflows and start working with your data on Day 1. This level of efficiency is unique to ASCONSIT and greatly simplifies the migration process.

Key benefits:

This scalable solution can be used to support companies both large and small. The key benefits include:

- **Migration** with access to data on DAY 1
- **Data analysis and clean up** to ensure your identity environment is more efficient when the migration concludes
- **Data migration** based on existing or customized mappings into the new world and scheduled updates
- **Industry-leading identity governance**

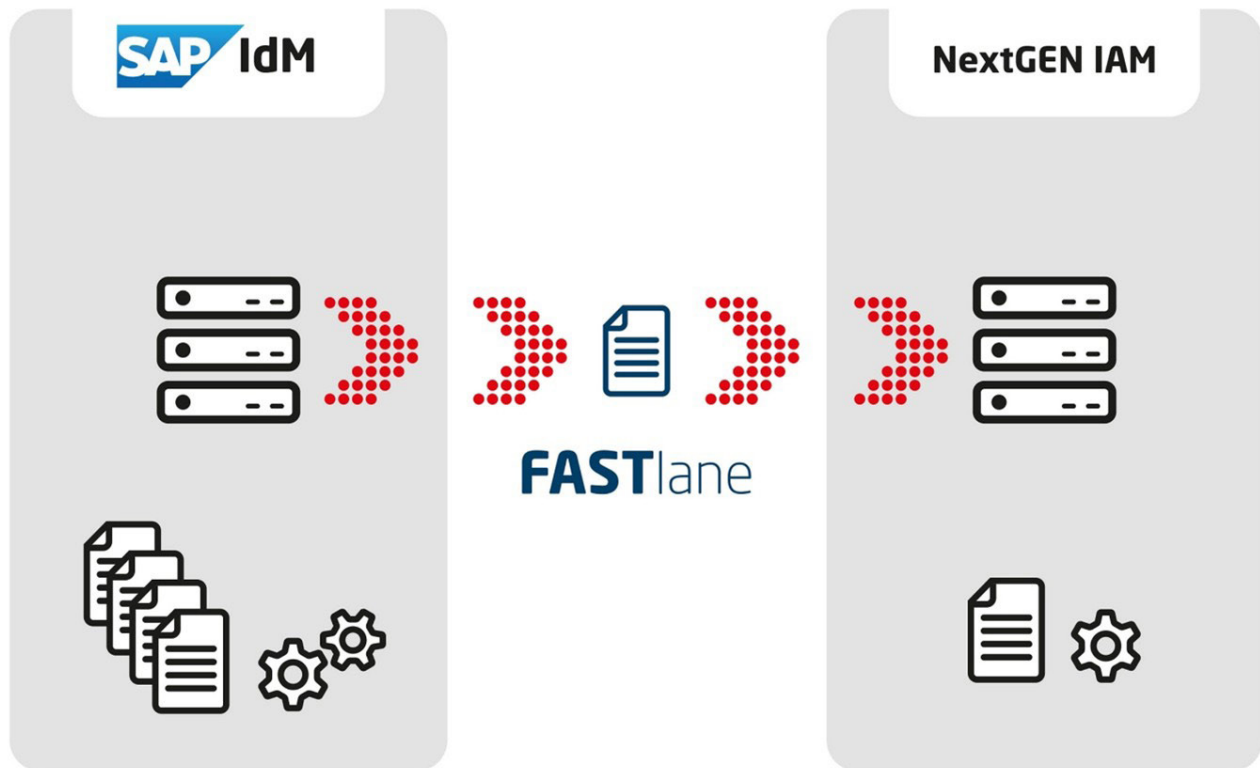

How it works:

With FastLane you can migrate from SAP IDM to Identity Manager without missing a beat. The process with FastLane is simple:

- Generate a new Identity Manager Cloud tenant
- Connect to that tenant
- Analyze and clean up your data
- Use mapping to ensure the data lands where it should
- Migrate your data seamlessly

Day One

Migration

Standard EntryTypes with Data like **MX_PERSON**, **MX_ROLE**, **MX_PRIVILEGE** etc.
Activating standard processes.

That tenant is not wasted – you can continue to use it moving forward as new Development environment and add Production on the top. Slowly migrate your systems towards Identity

Manager and migrate cleaned workflows to the new world. Stay in sync with scheduled and periodic updates from your existing SAP IDM environment.

Key benefits:

This scalable solution can be used to support companies both large and small. The key benefits include:

- Migration with access to data on DAY 1
- Data analysis and clean up to ensure your identity environment is more efficient when the migration concludes
- Data migration based on existing or customized mappings into the new world and scheduled updates
- Industry-leading identity governance

Use case:

Are you interested in the smart Identity Manager solution? Would you like to see your existing data and first workflow in action in just ONE DAY?

Cleaning data and removing features which are no longer necessary will help you streamline the functionality of your new solution.

Working immediately on setting up standard and custom workflows and connectors based on your data will help you complete the process faster.

All existing SAP IDM data is pulled out and can be reviewed and analyzed quickly in the FastLane solution. No connectivity is needed, and your existing environment is protected.

Business value:

With One Identity Manager and ASCONSIT FastLane, the sunsetting of SAP IDM is easily remedied with a solution that provides business continuity throughout the migration process with access to your data on DAY 1. Your identity management solution of choice is highly recommended by analysts and other customers, with features and benefits that are unmatched. Conclusion:

Your business relies on SAP to manage and protect your identity environment. One Identity Manager and ASCONSIT FastLane provide the migration solution that keeps your business running and helps you get back to business with greater efficiency and best-of-breed capabilities.

About One Identity

One Identity helps organizations strengthen cybersecurity, boost efficiency and control costs through the One Identity Fabric, a holistic approach to identity and access management (IAM). By unifying IAM tools, including identity governance and administration (IGA), access management (AM), privileged access management (PAM), and Active Directory management (AD Mgmt), it ensures optimal functionality and efficiency. This cohesive structure reduces identity sprawl and extends governance to the farthest endpoints of your IAM ecosystem. Proven and trusted on a global scale, One Identity manages more than 500 million identities for more than 11,000 organizations worldwide. For more information, visit www.oneidentity.com.

ASCONSIT

ASCONSIT is a specialized IT service provider focused on IT security solutions in the areas of Identity & Access Management (IAM), Privileged Access Management (PAM) and Access Management (AM).

We support organizations end-to-end – from consulting and planning to implementation and support. In addition, we develop custom IAM solutions and deliver modern, Angular-based frontends that enhance usability and process transparency. With deep technical migration expertise, we help enterprises transition smoothly to next-generation IAM systems.
